AZUCAR MINERALS LTD. (FORMERLY ALMADEX MINERALS LIMITED) MANAGEMENT'S DISCUSSION AND ANALYSIS

March 31, 2018

INTRODUCTION

This Management's Discussion and Analysis ("MD&A") for Azucar Minerals Ltd (formerly Almadex Minerals Limited) ("Azucar" or the "Company") has been prepared based on information known to management as of May 29, 2018. This MD&A is intended to help the reader understand the condensed consolidated interim financial statements of Azucar.

Management is responsible for the preparation and integrity of the condensed consolidated interim financial statements, including the maintenance of appropriate information systems, procedures and internal controls. Management also ensures that information used internally or disclosed externally, including the condensed consolidated interim financial statements and MD&A, is complete and reliable.

The Company's board of directors follows recommended corporate-governance guidelines for public companies to ensure transparency and accountability to shareholders. The board's audit committee meets with management regularly to review the condensed consolidated interim financial statements, including the MD&A, and to discuss other financial, operating and internal-control matters.

All currency amounts are expressed in Canadian dollars unless otherwise noted.

FORWARD-LOOKING STATEMENTS

Information set forth in this MD&A may involve forward-looking statements under applicable securities laws. Forward-looking statements are statements that relate to future, not past, events. In this context, forward-looking statements often address expected future business and financial performance, and often contain words such as "anticipate", "believe", "plan", "estimate", "expect", and "intend", statements that an action or event "may", "might", "could", "should", or "will" be taken or occur, or other similar expressions. All statements, other than statements of historical fact, included herein including, without limitation, statements about the size and timing of future exploration on and the development of the Company's properties, are forward-looking statements. By their nature, forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the Company's actual results, performance or achievements, or other future events, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following risks: the need for additional financing; operational risks associated with mineral exploration; fluctuations in commodity prices; title matters; environmental liability claims and insurance; reliance on key personnel; the volatility of the Company's common share price and volume and other factors beyond the Company's control. Forward-looking statements are made based on management's beliefs, estimates and opinions on the date that statements are made and the Company undertakes no obligation to update forward-looking statements if these beliefs, estimates and opinions or other circumstances should change, except as required by applicable securities laws. There can be no assurance that such statements will prove to be accurate, and future events and actual results could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from management's expectations are disclosed in the Company's documents filed from time to time via SEDAR with the Canadian regulatory agencies to whose policies the Company is bound. Investors are cautioned against attributing undue certainty to forward-looking statements.

The users of this information, including but not limited to investors and prospective investors, should read it in conjunction with all other disclosure documents available under the Company's profile on SEDAR (<u>www.sedar.com</u>) and/or on the Company's website at www.azucarminerals.com.

HIGHLIGHTS

Plan of Arrangement

On May 18, 2018, the Company announced that it had closed a statutory plan of arrangement (the "Plan of Arrangement") under which certain assets were transferred to 1154229 B.C. Ltd ("Spinco"). Azucar shareholders will receive shares in Spinco in proportion to their shareholdings in Azucar (the "Spin-out"). Spinco was incorporated on February 26, 2018. Under the terms of the Plan of Arrangement, Azucar's current shareholders will receive for each existing share of Azucar held as at the closing date of the Plan of Arrangement, one "new" share of Azucar and one share of Spinco.

In conjunction with the Plan of Arrangement, the Company entered into a subscription agreement with Newcrest Canada Holdings Inc., a wholly owned subsidiary of Newcrest Mining Limited ("Newcrest") pursuant to which Newcrest acquired 14,391,568 common shares of Azucar by way of a non-brokered private placement for aggregate gross proceeds of \$19,074,425. Newcrest now holds 19.9% of the issued common shares of Azucar.

El Cobre

Azucar's technical work during this quarter continued to be focused on the El Cobre gold-copper porphyry project.

OVERALL PERFORMANCE

Background

The Company is a mineral exploration and development company listed on the TSXV under the symbol "AMZ" and quoted on the OTCQX market place under the symbol "AXDDF". The Company was incorporated on April 10, 2015 under the laws of the Province of British Columbia. The Company's business activity is the acquisition and exploration of mineral properties in Canada, the United States and Mexico.

Azucar's management team has been focused on exploration and discovery in Mexico, the United States and Canada for the past 35 years. Traditionally, management has managed risk by forming joint ventures in which partner companies explore and develop projects in return for the right to earn an interest in them. This approach has exposed shareholders to discovery and capital gains without as much funding and consequent share dilution as would be required through sole development of exploration properties. In some cases projects were advanced further when they were considered of such merit that the risk/reward ratio favored that approach. In other cases, if a property was optioned out with unsatisfactory results and returned to management but considered by management to still have merit, the property rights were retained in order to demonstrate further potential. This is the fashion in which the EI Cobre discovery was made by Azucar, as the underlying project was optioned to four different partners prior to Azucar drilling the higher grade areas at the Norte target in 2016.

As noted above under "Highlights", the Company completed a Plan of Arrangement on May 18, 2018. Azucar's sole mineral asset is now its interest in the El Cobre project.

Company Mission and Focus

Azucar is an exploration company that is focused on exploration of its El Cobre gold/copper porphyry project in Veracruz, Mexico, in which it holds a 100% interest, subject to net smelter returns ("NSR") royalty interests, assuming production from the property exceeds 10,001 tonnes per day of ore, totaling 2.25% which can be reduced to 2.0% though the payment of US\$3.0 million.

Qualified Person

Morgan Poliquin, Ph.D., P.Eng., a qualified person under the meaning of National Instrument 43-101 ("NI 43-101"), and the President, Chief Executive Officer and a director of Azucar, has reviewed and approved the technical content in this MD&A.

Use of the terms "Mineral Resources" and "Mineral Reserves"

All capitalized terms used in this section have the meaning given to them in NI 43-101.

Any reference in this MD&A to Mineral Resources does not mean Mineral Reserve.

A Mineral Reserve is the economically mineable part of a Measured or Indicated Mineral Resource demonstrated by at least a Preliminary Feasibility Study. This Study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A Mineral Reserve includes diluting materials and allowances for losses that may occur when the material is mined.

Mineral Resources are sub-divided, in order of increasing geological confidence, into Inferred, Indicated and Measured categories. An Inferred Mineral Resource has a lower level of confidence than that applied to an Indicated Mineral Resource. An Indicated Mineral Resource has a higher level of confidence than an Inferred Mineral Resource but has a lower level of confidence than a Measured Mineral Resource.

MINERAL PROPERTIES

The following is a brief description of the more active mineral properties owned by the Company. Additional information can be obtained from Azucar's website <u>www.azucarminerals.com</u>.

El Cobre – Mexico

Historically, the EI Cobre property formed part of the larger Caballo Blanco property owned by Almaden Minerals Ltd ("Almaden"). Pursuant to an agreement between Almaden and Goldgroup Mining Inc. ("Goldgroup") dated February 5, 2010, Goldgroup gained the right to acquire a 70% interest in Almaden's 100% owned Caballo Blanco project under the condition that a portion of the Caballo Blanco property, the EI Cobre property, be transferred to a new entity, owned 60% by Almaden and 40% by Goldgroup. Subsequently, on October 17, 2011, Almaden closed an agreement with Goldgroup to sell its remaining 30% interest in the Caballo Blanco property and to acquire a 100% interest in the El Cobre property. This property was later transferred to Azucar as detailed in the Plan of Arrangement dated July 31, 2015, which resulted in the formation of Azucar. Azucar now owns a 100% interest in El Cobre, subject to a sliding-scale NSR equivalent to 0.5% in the event that production from the property exceeds 10,001 tonnes per day of ore. This NSR can be reduced to 0.25% at this production rate through the payment of US\$3 million.

Location and Ownership

The 100% owned El Cobre Project has a total area of approximately 7,400 hectares and is located adjacent to the Gulf of Mexico, about 75 kilometres northwest of the city of Veracruz, Mexico. Veracruz is a major port city and naval base with an international airport with numerous daily flights to and from Mexico City and other national and international destinations. The nearest supply centre to the Project is Cardel, a town of 20,000, located approximately 30 km south of the claim block, which is accessed via the Pan American Highway located roughly four kilometres by road from the claim boundary. Less than 10 km northeast of the Project sits Mexico's only nuclear power plant at Laguna Verde and the project is crossed by the electrical power grid. Water is relatively abundant in small creeks at elevations below 200 metres throughout most of the year.

Recent Updates

The four copper-gold porphyry targets currently known within the El Cobre Project, Villa Rica (Raya Tembrillo), Norte, Encinal, and El Porvenir, are defined by distinct Cu-Au soil anomalies, discrete, positive magnetic features and a large IP chargeability anomaly. The largest target area is the Villa Rica zone. First pass drilling at the Villa Rica (Raya Tembrillo) target in 2017 intersected a chalcocite dominant enriched copper zone right from surface as well as hypogene mineralisation at depth. At this time the extent and orientation of both the hypogene and enriched mineralisation are not understood. Further drilling in the area is planned.

Limited past RC and diamond drill testing at the Encinal, El Porvenir, and Norte targets has returned wide intercepts of porphyry copper-gold and narrow zones of intermediate sulphidation epithermal gold-silver vein mineralization, with selected intercepts as follows:

<u>El Porvenir Zone:</u> Drilling has demonstrated that the system persists at least to 400 m depth. Significant copper and gold grades were intersected such as 0.16% Cu and 0.39 g/t Au over 290 m in hole DDH04CB1. In addition, hole EC-13-004 intersected 0.23% Cu and 0.36 g/t Au over 106 m, to a depth of 504 m, again indicating potentially significant mineralization at depth. On December 5, 2017, Almadex announced results for holes 040 and 042, the first holes drilled on this target since 2013. Intercepts in hole EC-17-040 included 108.00 meters grading 0.88 g/t Au and 0.29% Cu, and 80.00 meters grading 1.11 g/t Au and 0.36% Cu.

Encinal Zone: Drilling in 1998 (Hole CB5) intersected a highly altered breccia pipe containing fragments of stockwork veining and porphyry mineralisation across which 18.28 meters returned 1.42 g/t Au and 0.10% Cu. The breccia pipe occurs in a large alteration zone, IP chargeability high and magnetics low. On June 19, 2017 Almadex announced that a new area of exposed stockwork quartz veining and gold mineralisation had been identified in the Encinal zone. On June 29, 2017 Almadex announced the results of initial drilling on this exposed stockwork (Hole EC-17-025) which returned results including 34.47 meters grading 0.73 g/t Au and 0.20% Cu.

<u>Norte Zone:</u> All five holes drilled in the Norte zone prior to 2016 intersected porphyry-style mineralization. Hole 08-CBCN-022, one of the deepest holes drilled at Norte in 2008, returned values of 0.14% Cu with 0.19 g/t Au over 259 m and 08-CBCN-19 intersected 41.15 meters averaging 0.42 g/t gold and 0.27% copper to the end of the hole at 187.45 meters. Drilling at the Norte zone in 2016 and 2017 has resulted in the highest grade intersections to date at the El Cobre project, including 114.60 meters grading 1.33 g/t Au and 0.48% Cu (Hole EC-17-018, see press release of April 5, 2017), 80.50 meters grading 1.34 g/t Au and 0.46% Cu (Hole EC-16-012, see press release of October 24, 2016), 70.45 meters grading 2.32 g/t Au and 0.59% Cu (Hole EC-17-026, see press release of July 25, 2017), and 534.90 meters grading 0.90 g/t Au and 0.30% Cu (Hole EC-17-029, see press release of August 15, 2017). Since the Norte zone discovery, Almadex has

been carrying out a systematic drill campaign to define this target. Future Norte drilling will focus on defining the high grade zone now emerging from the Norte drill program.

In addition to the above, several anomalous areas either remain untested by drilling or have only seen drilling commence very recently, including the Villa Rica Zone, a roughly 2.5 kilometre by 1 kilometre area defined by a strong north-northwest trending magnetic-chargeability high, an associated copper-gold soil geochemical anomaly, and significant outcrop, float, and channel sample assays.

During the three months ended March 31, 2018, the Company incurred a total of \$5,463 (March 31, 2017 - \$Nil) in acquisition cost and \$388,935 (March 31, 2017 - \$530,397) exploration costs respectively at the El Cobre property.

Upcoming / Outlook

Data compilation and further drilling is planned at El Cobre target areas and results will be released as they are received and compiled.

Other properties

Other properties consist of a portfolio of early stage exploration projects located in Canada, United States and Mexico. During the three months ended March 31, 2018, the Company incurred in acquisition and exploration costs of \$81,587 on a care and maintenance basis and recorded a write-down of \$81,587 (March 31, 2017 - \$51,000) with respect to these properties.

RISK FACTORS

The Company is engaged in exploration for mineral deposits. These activities involve significant risks which, even with careful evaluation, experience and knowledge, may not, in some cases, be eliminated. The Company's success depends on a number of factors, many of which are beyond its control. The primary risk factors affecting the Company include inherent risks in the mining industry, metal price fluctuations and operating in foreign countries and currencies.

Inherent risks within the mining industry

The commercial viability of any mineral deposit depends on many factors, not all of which are within the control of management. Some of the factors that will affect the financial viability of a given mineral deposit include its size, grade and proximity to infrastructure. Government regulation, taxes, royalties, land tenure and use, environmental protection and reclamation and closure obligations could also have a profound impact on the economic viability of a mineral deposit.

Mining activities also involve risks such as unexpected or unusual geological operating conditions, floods, fires, earthquakes, other natural or environmental occurrences and political and social instability. It is not always possible to obtain insurance against all such risks and the Company may decide not to insure against certain risks as a result of high premiums or for other reasons. The Company does not currently maintain insurance against political or environmental risks. Should any uninsured liabilities arise, they could result in increased costs, reductions in profitability, and a decline in the value of the Company's securities.

There is no assurance at this time that the Company's current mineral properties will be economically viable for development and production.

Market volatility for marketable securities and investments

The Company's marketable securities consist of shares of exploration companies which are historically very volatile. The Company's investments consist of gold bullion with fluctuating market prices. There is no assurance that the Company will be able to recover the current fair market value of those shares. The Company also may hold a large number of shares which may be difficult to sell in illiquid markets from time to time.

Industry

The Company is engaged in the exploration and development of mineral properties which is an inherently risky business. There is no assurance that a mineral deposit will ever be discovered, developed and economically produced. Few exploration projects result in the discovery of commercially mineable ore deposits. If market conditions make financings difficult, it may be difficult for the Company to find joint venture partners. The Company may be unsuccessful in identifying and acquiring projects of merit.

Mineral resource estimates

The estimation of reserves and mineralization is a subjective process and the accuracy of any such estimates is a function of the quality of available data and of engineering and geological interpretation and judgment. No assurances can be given that the volume and grade of reserves recovered and rates of production will not be less than anticipated.

Prices of gold, silver and other metals

The price of gold is affected by numerous factors including central bank sales or purchases, producer hedging activities, the relative exchange rate of the U.S. dollar with other major currencies, supply and demand, political, economic conditions and production levels. In addition, the price of gold has been volatile over short periods of time due to speculative activities.

The price of silver is affected by similar factors and, in addition, is affected by having more industrial uses than gold, as well as sometimes being produced as a by-product of mining for other metals with its production thus being more dependent on demand for the main mine product than supply and demand for silver. The prices of other metals and mineral products, such as copper, that the Company may explore for have the same or similar price risk factors.

Cash flows and additional funding requirements

The Company currently has no revenue from operations. In order to continue to advance and develop its mineral properties, the Company will have to raise additional capital. The sources of funds currently available to the Company include equity capital, potential debt capital or the offering of an interest in its projects to another party. The Company currently has sufficient financial resources to undertake all of its currently planned exploration and development programs.

Exchange rate fluctuations

Fluctuations in currency exchange rates, principally the Canadian/U.S. Dollar and the Canadian/Mexican Peso exchange rates, can impact cash flows. The exchange rates have varied substantially over time. Fluctuations in exchange rates may give rise to foreign currency exposure, either favourable or unfavourable, which will impact financial results. The Company does not engage in currency hedging to offset any risk of exchange rates fluctuation.

Environmental

The Company's exploration and development activities are subject to extensive laws and regulations governing environmental protection. The Company is also subject to various reclamation-related conditions. Although the Company closely follows and believes it is operating in compliance with all applicable environmental regulations, there can be no assurance that all future requirements will be obtainable on reasonable terms. Failure to comply may result in enforcement actions causing operations to cease or be curtailed and may include corrective measures requiring capital expenditures. Intense lobbying over environmental concerns by NGOs opposed to mining has caused some governments to cancel or restrict development of mining projects. Current publicized concern over climate change may lead to carbon taxes, requirements for carbon offset purchases or new regulation. The costs or likelihood of such potential issues to the Company cannot be estimated at this time.

Laws, Regulations, and Permits

The Company's exploration activities are subject to extensive federal, provincial, state and local laws and regulations governing prospecting, development, production, exports, taxes, labour standards, occupational health and safety, mine safety, waste disposal, protection of the environment, protection of historic and archeological sites, protection of endangered and protected species and other matters in all the jurisdictions in which it operates. The Company is required to have a wide variety of permits from governmental and regulatory authorities to carry out its activities. These permits relate to virtually every aspect of the Company's exploration and exploitation activities. Changes in these laws and regulations or changes in their enforcement or interpretation could result in changes in legal requirements or in the terms of the Company's permits that could have a significant adverse impact on the Company's existing or future operations or projects. Obtaining permits can be a complex, time-consuming process. There can be no assurance that the Company will be able to obtain the necessary permits on acceptable terms, in a timely manner or at all. The costs and delays associated with obtaining permits and complying with these permits and applicable laws and regulations could stop or materially delay or restrict the Company from continuing or proceeding with existing or future operations or projects. Any failure to comply with permits and applicable laws and regulations, even if inadvertent, could result in the interruption or closure of operations or material fines, penalties or other liabilities. The Company applies the expertise of its management, advisors, employees and contractors to ensure compliance with current laws and relies on its land men and legal counsel in Canada, Mexico and United States.

In Mexico, the Mining Law (Ley Minera) regulates all mining activities. Article 62 of this law requires full compliance with all the environmental laws and regulations.

Mining activities are regulated by the Ministry of Economy (Secretaría de Economía), through which the Undersecretary of Industry and Commerce (Subsecretaría de Industria y Comercio) coordinates the industrial and commercial sector. As part of the Undersecretary of Industry and Commerce, the General Mining Coordination (Coordinación General de Minería) and the General Mining Department (Dirección General de Minería) both regulate the mining sector in These authorities require that all mining companies comply with all the the country. Environmental and National Protection regulations. The country's federal government works toward sustainable development and environmental protection through the Ministry of Environment and Natural Resources 'Secretariat of Environment and Natural Resources (Spanish: Secretaría del Medio Ambiente y Recursos Naturales, SEMARNAT). Minina companies must obtain Environmental Impact Statement and Risk Assessment Permits (EIS) from SEMARNAT prior to any mining activities, and such activities are subsequently subject to several environmental permits from different offices with SEMARNAT and other governmental bodies, including permits for explosives, change of use of land applications, water usage and extraction, wastewater discharge and tailings disposal. Under the Mexican Mining Law,

concessionaires must adhere to federal environmental regulations, and their activities are subject to an environmental review. All mining companies are required to prepare and file an EIS for all extractive operations as well as non-standard exploration work such as tunneling. It is also general practice to obtain an Archeological Release from the National Institute of Archeology and History ("INAH") at the time of the EIS application.

Surface exploration activities generally have a very low environmental impact. If an exploration project conforms to the NOM-120-SEMARNAT-1997 (Norma Oficial Mexicana NOM-120-SEMARNAT, 1997 [1998]), SEMARNAT does not require a permit to conduct low impact surface work such as drilling. In practice, although not required under the NOM-120, many companies submit an "Informe Preventivo", a report that states the measures that will be used by the company to minimize environmental impacts.

To its knowledge the Company has complied with all regulations in order to conduct its exploration activities. Exploration activities on the EI Cobre project are low impact however the Company has filed several Informe Preventivo reports which have all been approved by SEMARNAT in Veracruz State. The Company's EI Cobre project is located in a general region where Pre-Columbian archaeological sites are known. To date exploration programs on the project were conducted in consultation with the Federal Agency for Archeology, INAH, which resulted in the identification of several small areas for further study and classification. The outcome of this future work is unknown however these areas do not impact the Company's ability to conduct its current exploration activities. The Company will continue to consult with INAH as the project progresses.

Political, economic and social environment

The Company may be adversely affected by political, economic and social uncertainties which could have a material adverse effect on the Company's results of operations and financial condition. Certain areas in which the Company will hold or may acquire properties have experienced and may continue to experience local political unrest and disruption which could potentially affect the Company's projects or interests. Changes in leadership, social or political disruption or unforeseen circumstances affecting political, economic and social structure could adversely affect the Company's property interests or restrict its operations. The Company's mineral exploration and development activities may be affected by changes in government regulations relating to the mining industry and may include regulations on production, price controls, labour, export controls, income taxes, expropriation of property, environmental legislation and safety factors.

Title to mineral properties

While the Company has investigated title to its mineral properties, this should not be construed as a guarantee of title. The properties may be subject to prior unregistered agreements or transfers and title may be affected by undetected defects.

Possible dilution to present and prospective shareholders

The Company's plan of operation, in part, contemplates the financing of its business by the issuance of securities and possibly incurring debt. Any transaction involving the issuance of previously authorized but unissued common shares, or securities convertible into common shares, would result in dilution, possibly substantial, to present and prospective shareholders. The Company has traditionally sought joint venture partners to fund in whole or in part exploration projects. Offering an interest in its projects to partners would dilute the Company's interest in the projects.

Material risk of dilution presented by large number of outstanding share purchase options and warrants

At May 29, 2018, there were 3,198,500 stock options and 3,292,395 warrants outstanding. Directors and officers hold 2,599,000 of the options and 599,500 options are held by employees and consultants of the Company.

Trading volume

The relatively low trading volume of the Company's shares reduces the liquidity of an investment in its shares.

Volatility of share price

Market prices for shares of early stage companies are often volatile. Factors such as announcements of mineral discoveries or discouraging exploration results, changes in financial results, and other factors could have a significant effect on share price.

Competition

There is competition from other mining exploration companies with operations similar to Azucar. Many of the companies with which it competes have operations and financial strength greater than the Company.

Dependence on management

The Company depends heavily on the business and technical expertise of its management.

Conflict of interest

Some of the Company's directors and officers are directors and officers of other natural resource or mining-related companies. These associations may give rise from time to time to conflicts of interest. If a conflict arises, the Company may miss the opportunity to participate in certain transactions.

Impairment of Exploration and Evaluation Assets

The Company assesses its exploration and evaluation assets quarterly to determine whether any indication of impairment exists. Common indications of impairment, which is often judgemental, include, but are not limited to, that: the right to explore the assets has expired or will soon expire and is not expected to be renewed, substantive expenditure of further exploration is not planned, or the results are not compelling enough to warrant further exploration by the Company.

At March 31, 2018, the Company concluded that impairment indicators existed with respect to certain of its exploration and evaluation assets. An impairment of acquisition and deferred exploration cost incurred of \$81,587 for the three months ended March 31, 2018 (March 31, 2017 - \$51,000), has been recognized.

Material Financial and Operations Information

Summary of Quarterly Results

The following is a summary of the Company's financial results since becoming a reporting issuer for the quarters ending at the dates noted:

	Q1 Mar 2018 Quarter	Q4 Dec 2017 Quarter	Q3 Sep 2017 Quarter	Q2 Jun 2017 Quarter	Q1 Mar 2017 Quarter	Q4 Dec 2016 Quarter	Q3 Sep 2016 Quarter	Q2 Jun 2016 Quarter
	\$	\$	\$	\$	\$	\$	\$	\$
Total revenue	178,872	155,431	62,889	59,630	42,091	72,989	128,280	15,421

Results of Operations and Financial Results

Results of Operations for the three months ended March 31, 2018 compared to the three months ended March 31, 2017

For the three months ended March 31, 2018, the Company recorded a net loss of \$230,262 (2017 - \$715,085) or a basic and diluted net loss of \$0.00 per share (2017 - \$0.02). The Company has no revenues from mining operations as it only conducts exploration work. The revenue of \$178,872 (2017 - \$42,091) during the three months ended March 31, 2018 consisted of interest income of \$825 (2017 - \$2,188) from cash balances. Other income of \$178,047 (2017 - \$39,903) consist of drilling equipment rental services to Almaden.

A significant portion of total expenses of \$611,156 during the three months ended March 31, 2018 (2017 - \$1,055,374) were related to general and administrative expenses such as sharebased payments of \$Nil (2017 - \$809,074), professional fees of \$361,256 (2017 - \$28,723), travel and promotion of \$10,759 (2017 - \$10,230) and various other expenses incurred by the Company to review business opportunities and to communicate with shareholders. An administrative services fee of \$109,682 (2017 - \$104,494) was paid to Almaden during the three months ended March 31, 2018 for providing office space, executive management services, marketing support and technical oversight to Azucar.

Significant non-cash items during the three months ended March 31, 2018 included impairment of exploration and evaluation assets of \$81,587 (2017 - \$51,000), share-based payments of \$Nil (2017 - \$809,074) and gain on fair value of contingent shares receivable of \$7,800 (2017 - loss of \$3,900). Impairment of exploration and evaluation assets fluctuates period to period based on management's evaluation of the carrying value of each exploration and evaluation asset interest held at that time. The share-based payments are recognized on the grant of stock options. The

contingent shares receivable is based on the fair value of the common shares of Goldgroup Mining Inc. ("Goldgroup") held by the Company as at March 31, 2018.

Liquidity and Capital Resources

At March 31, 2018, the Company had working capital of \$10,755,545, including cash and cash equivalents of \$6,520,172.

Management believes that the Company's cash resources are sufficient to meet its working capital and mineral exploration requirements for its next fiscal year as these expenditures are considered discretionary by management. The Company has no material commitments for the next fiscal year. Management has a proven track record to be able to raise money even in a very challenging financial marketplace.

Three months ended March 31, 2018

Net cash used in operations during the three months ended March 31, 2018 was \$215,430 (2017 - \$286,417), after adjusting for non-cash activities.

Net cash used in investing activities of \$455,114 (2017 - \$665,368) during the three months ended March 31, 2018 relates to net proceeds from sale of marketable securities of \$30,345 (2017 - \$36,613), net proceeds from sale of property and equipment of \$103,798 (2017 - \$Nil) and property and equipment purchase of \$28,241 (2017 - \$9,316) as the Company acquired field equipment for its drilling program at the El Cobre project. Cash used in investing activities relates to expenditures on exploration and evaluation assets of \$561,016 (2017 - \$692,665) mainly on the El Cobre project.

Net cash from financing activities during the three months ended March 31, 2018 was \$5,679,297 (2017 - \$3,467,725), as a result of a non-brokered private placement closed on March 27, 2018 and \$409,220 (2017 - \$235,940) from stock options exercised.

Disclosure of Outstanding Share Data

The authorized share capital of the Company consists of an unlimited number of common shares without par value.

	Number of Common Shares Issued & Outstanding	Share Capital Amount
December 31, 2016	44,336,369	\$12,093,447
December 31, 2017	48,422,869	\$15,977,418
May 29, 2018	72,319,437	\$46,152,004

Share issuances during fiscal 2018

During the three months ended March 31, 2018, the Company received \$409,220 on the exercise of 1,306,000 options.

On March 27, 2018, the Company closed a non-brokered private placement by the issuance of 4,000,000 units at a price of \$1.40 per unit for gross proceeds to the Company of \$5,600,000. Under the private placement the Company issued 1,999,995 warrants. Each whole warrant allows the holder to purchase one common share of the Company at a price of \$2.00 per share until March 27, 2020. Share issue costs included a finders' fee of \$166,555 in cash. In connection with the private placement, the Company also incurred \$163,368 in other cash share issue costs. These amounts were recorded as reduction to share capital. The proceeds of the private placement were allocated entirely to share capital.

On May 18, 2018, the Company closed on a non-brokered private placement with Newcrest to acquire 14,391,568 Azucar shares at a price of approximately \$1.33 per share for aggregate proceeds of \$19,074,425. The Azucar shares issued to Newcrest will be subject to a hold period until September 19, 2018. Upon closing of the private placement, Newcrest holds 19.9% of the issued and outstanding Azucar shares and has no ownership in Spinco.

Furthermore, as part of the Plan of Arrangement, the Company issued 4,000,000 shares to Spinco at a price of approximately \$1.28 per share.

The following table summarizes information about stock options outstanding at May 29, 2018:

As of date of this MD&A, there were 72,319,437 common shares issued and outstanding and 78,810,332 common shares outstanding on a diluted basis.

Environmental Provisions and Potential Environmental Contingency

The Company's mining and exploration activities are subject to various federal, provincial and state laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations. The Company's exploration activities to date are not significant however the ultimate amount of reclamation and other future site restoration costs to be incurred in the future is uncertain.

Off-Balance Sheet Arrangements

None.

Contractual Commitments

None.

Proposed Transactions

None.

Transactions with Related Parties

(a) Compensation of key management personnel

Key management personnel include those persons having the authority and responsibility for planning, directing and controlling the activities of the Company as a whole. The aggregate value of compensation to key management personnel was as follows:

	Share-based				
Year ended March 31, 2018	Fees	Payments	Total		
	\$	\$	\$		
Chairman	18,000	-	18,000		
President & CEO	25,125	-	25,125		
CFO	16,875	-	16,875		
VP Corporate Development	15,900	-	15,900		
Directors	-	-	-		
	75,900	-	75,900		

Year ended March 31, 2017	Share-based Fees Payments T				
	\$	\$	\$		
Chairman	18,000	109,560	127,560		
President & CEO	22,875	174,300	197,175		
CFO	15,263	-	15,263		
VP Corporate Development	14,437	-	14,437		
Directors	-	224,920	224,920		
	70,575	508,780	579,355		

Fees are paid to Almaden for services provided by key management pursuant to the Administrative Services Agreement between Azucar and Almaden, as further described below.

(b) Other related party transactions

Administrative Services Agreement

The Company paid administrative services fees to Almaden pursuant to an Administrative Services Agreement dated May 15, 2015, under which Almaden provides the Company with office space, executive management, marketing support, technical oversight, and financial/corporate secretary duties, amongst other administrative services.

At March 31, 2018, included in trade and other payable is \$325,033 (December 31, 2017 - \$195,550) due to Almaden.

Other

At March 31, 2018, other income of \$178,047 (March 31, 2017 - \$39,903) was paid by Almaden to the Company for drill equipment rental services in Mexico of which of \$178,047 (December 31, 2017 - \$153,038) is recorded in accounts receivable.

At March 31, 2018, the Company paid a company controlled by a Director of the Company \$7,721 (March 31, 2017 - \$24,569) for geological services included in exploration and evaluation assets.

Financial Instruments

The fair values of the Company's cash and cash equivalents, accounts receivable and trade and other payables approximate their carrying values because of the short-term nature of these instruments. The Company's reclamation deposits approximate fair value as the expected proceeds on redemption approximate its carrying value. See note (f) for fair values of assets held for sale.

There have been no changes during the three months ended March 31, 2018, as to how the Company classifies its financial assets and liabilities by FVTPL, FVOCI, amortized cost, and other financial liabilities upon adoption of IFRS 9.

The Company's financial instruments are exposed to certain financial risks, including currency risk, credit risk, liquidity risk, interest rate risk and commodity and equity price risk.

(a) Currency risk

The Company's property interests in Mexico make it subject to foreign currency fluctuations and inflationary pressures which may adversely affect the Company's financial position, results of operations and cash flows. The Company is affected by changes in exchange rates between the Canadian Dollar and foreign currencies. The Company does not invest in foreign currency contracts to mitigate the risks.

As at March 31, 2018, the Company was exposed to foreign exchange risk through the following assets and liabilities denominated in currencies other than the functional currency of the applicable subsidiary:

All amounts in Canadian dollars	US dollar	Mexican peso
	\$	\$
Cash and cash equivalents	437,250	386,687
Account receivables and prepaid expenses	-	419,309
Total assets	437,250	805,996
Trade and other payables	44,202	998
Total liabilities	44,202	998
Net assets	393,048	804,998

A 10% change in the US dollar exchange rate relative to the Canadian dollar would change the Company's profit or loss by \$39,000.

A 10% change in the Mexican peso relative to the Canadian dollar would change the Company's profit or loss by \$80,000.

(b) Credit risk

The Company's cash and cash equivalents are held in large Canadian and Mexican financial institutions. The Company's accounts receivable consists primarily of sales tax due from the federal government of Canada. The Company is exposed to credit risks through its accounts receivable.

To mitigate exposure to credit risk on cash and cash equivalents, the Company has established policies to limit the concentration of credit risk with any given banking institution where the funds are held, to ensure counterparties demonstrate minimum acceptable credit risk worthiness and ensure liquidity of available funds. As at March 31, 2018, the Company's maximum exposure to credit risk is the carrying value of its cash and cash equivalents, and accounts receivable.

(c) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure.

Trade and other payables are due within twelve months of the statement of financial position date.

(d) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company is exposed to varying interest rates on cash and cash equivalents. The Company has no interest bearing debt.

A 1% change in the interest rate would change the Company's net loss by \$Nil.

(e) Commodity and equity price risk

(i) Commodity price risk

The ability of the Company to explore its exploration and evaluation assets and the future profitability of the Company are directly related to the market price of gold and other precious metals. The Company has not hedged any of its potential future gold sales of the quantities held in investments. The Company monitors gold prices to determine the appropriate course of action to be taken by the Company.

A 1% change in the price of gold would affect the fair value of the Company's gold investment by \$27,000.

(ii) Equity price risk

Equity price risk is defined as the potential adverse impact on the Company's operations due to movements in individual equity price or general movements in the level of the stock market. The Company closely monitors the individual equity movements and the stock market to determine the appropriate course of action to be taken by the Company.

(f) Classification of Financial instruments

IFRS 13 establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value as follows:

Level 1 – quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following table sets forth the Company's financial assets measured at fair value by level within the fair value hierarchy.

	Level 1	Level 2	Level 3	Total
	\$	\$	\$	\$
Assets held for sale (Note 9 Azucar's				
Financial Statements as at Mar 31, 2018)	2,961,271	31,200	-	2,992,471

Level 2 inputs used in determining the fair value of contingent shares receivable includes the use of quoted market prices for the underlying shares of the public companies, as well as estimates regarding the likelihood of achieving certain milestones that would trigger the collection of the contingent shares receivable by the Company.

Management of Capital

The Company considers its capital to consist of components of equity. The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the exploration of its exploration and evaluation assets and to maintain a flexible capital structure which optimizes the costs of capital at an acceptable risk.

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares and, acquire or dispose of assets.

In order to maximize ongoing exploration efforts, the Company does not pay out dividends. The Company's investment policy is to invest its short-term excess cash in highly liquid short-term interest-bearing investments with short-term maturities, selected with regards to the expected timing of expenditures from continuing operations.

The Company expects its current capital resources will be sufficient to carry its exploration plans and operations through its current operating period. There have been no changes to the Company's capital management approach during the period. The Company is not subject to externally imposed capital requirements.

Subsequent Events

The Company received \$80,030 on the exercise of 199,000 stock options with exercise prices from \$0.37 to \$0.46.

On May 18, 2018, the Company changed its name from Almadex Minerals Limited to Azucar Minerals Ltd. ("Azucar") (TSX-V: AMZ; OTCQX: AXDDF), and completed a statutory plan of arrangement whereby the Company's early stage exploration projects, royalty interests, and certain other assets were spun-out into a new company, 1154229 B.C. Ltd., which was subsequently re-named Almadex Minerals Ltd. (TSX-V: DEX). Azucar will retain 100% ownership of the EI Cobre gold/copper porphyry project, subject to royalty interests.

In conjunction with the Plan of Arrangement, the Company entered into a subscription agreement with Newcrest Canada Holdings Inc., a wholly owned subsidiary of Newcrest Mining Limited ("Newcrest") pursuant to which Newcrest acquired 14,391,568 common shares of Azucar by way of a non-brokered private placement for aggregate gross proceeds of \$19,074,425. Newcrest now holds 19.9% of the issued common shares of Azucar.

Furthermore, as part of the Plan of Arrangement, the Company issued 4,000,000 shares to Almadex Minerals Ltd. at a price of approximately \$1.28 per share.
